## ACCOUNT TYPES

### Financial Maintenance

#### Chart of Accounts

- 😊 [Accounting Period](#)
- 😊 [Account Type](#)
- AICPA Function

Using the Account type lookup in Kualu, we see the following types:

Account Type Code	Account Type Name
AS	Asset
EX	Expense
FB	Fund Balance
LI	Liability
RE	Revenue

Transactions must go into the appropriate account type and object codes are matched to the account type as well. For example, that means you would use expense object codes for expenses, and you would charge them to expense accounts.

## ACCOUNT NUMBERS

Following is a chart that will help you understand the way the 10-digit account numbers are organized. You can see that the account numbers do have a meaning, especially the first two digits, which will help you quickly identify the correct account to use without having to look at the sub fund code or the account type code.

**First Two** numbers in the Account Number help to identify the type of account and the sub fund group.

**Middle four** XXXX – Usually unique to a specific school or center. It identifies a pattern of account numbering that helps in organizing account access and reporting.

**Last four** XXXX – Used by the school or center to organize and create their accounts in a pattern set by them.

## ACCOUNT LOOKUP IN KUALI

- Account Lookup does not require that you have access to the account, since it is just general information that is shown.
- You can use wild cards \* in any of the fields to search for an account, but you can only view one account at a time.
- You can search by org code, by account mask, or by fiscal officer, using wild cards where needed.
- Account masks are the starting 4-6 numbers of the full ten-digit account number, and should be unique to your budget center. When using an account mask in your search, be sure to use the wild card.
